

Materials Set Up

Do all the following before working on modeling your solution:

1. Materials Manager brings over materials.
2. Place the large pad on the table with absorbent side up.
3. Put the tub with the site model on the large pad with the drain hole over the edge of the table.
4. Place the small pad on the floor with the plastic side down and put the bucket on the pad under the drain hole so that the bucket will catch any water that comes out of the drain hole.
5. Make sure the drain plug is in the hole.

Leave the rain jar in materials area.

Once your tub is set up, let an adult know what additional materials you will need from the class supply.
